REASONS FOR ALLOWANCE

Claims 1-9 and 11-15 are allowed.

The following is an examiner's statement of reasons for allowance: the references of record neither reveal nor render obvious the recited combination of using a mapping table to simulate code sequences produced by a hypothetical encoder [claims 1-5 and 11-14] and using a mapping table to produce higher information quality with a second decoder [claims 6-9 and 15].

U.S. Patent 7,016,409 to Unger uses first and second encoder bit rates. U.S. Patent 6,952,443 to Kong et al transmits data at variable rates. U.S. Patent 6,944,160 to Weiss et al multiplexes low and high fidelity voice data. U.S. Patent 6,850,021 to Golownia et al discloses a virtual encoder [30]. U.S. Patent 6,289,455 to Kocher et al uses rights keys to regulate access to digital content. U.S. Patent 6,091,855 to Hosaka et al predicts high-resolution data based on low-resolution data. U.S. Patent 5,589,993 to Naimpally provides low and high-resolution video signals. U.S. Patent 5,557,318 to Gabriel combines sets of low and high-quality video signals. U.S. Patent 5,459,514 to Sakamoto et al transmits and receives low and high-resolution television signals. U.S. Patent 5,446,371 to Eccleston uses low and high-resolution ADC paths. U.S. Patent 5,287,374 to Parr observes data in order to identify [19] encoders [13/14]. U.S. Patent 5,173,900 to Miller et al transmits different categories of data in a single data stream. U.S. Patent 4,745,474 to Schiff provides low [22] and high [24] resolution filtered signals.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
